DETAILED ACTION

General status

1. This is a Final Action on the Merits. Claims 1 and 5 are pending in the case and are being examined.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Renz et al. [6,720,515] in view of Nonken [US 3,812,314].

Regarding Claims 1 and 5, Renz et al. disclose a switchgear assembly having at least one switch disconnector [22, Figure 1], characterized in that the switch disconnector is in the form of a three-position vacuum switching chamber [11, 12] including an electrically conductive edge board [15] that forms the ground point for the three position vacuum switching chamber; the edge board extends radially outwardly. However, Renz et al. does not disclose an enclosure. Nonken, in Figure 1 and 3, discloses a switchgear which is installed in a gas filled enclosure [16'] and also the switch gear is provided with a cast-resin body [1], with switchgear forming a bushing and extends partially inside the enclosure and partially extending outside the enclosure [Figure 3]. It would have been obvious to one of ordinary skill in the art at the time the invention was made to install the switchgear of Renz et al. into an enclosure, as

suggested by Nonken, in order to make electrical connection of conductors extending from the bottom of the switchgear to other electrical components. Since the edge board extends the outside of the vacuum switching chamber, it would have been obvious to provide a seal between the extending board and a portion of the enclosure in order to seal the gas enclosure.

Response to Arguments

4. Applicant's arguments with respect to claims 1 and 5 have been considered but are moot in view of the new ground of rejection.

Conclusion

5. Applicant's amendment necessitated the new grounds of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
